## Education

### University of Florida

Bachelor of Science in Computer Science, GPA: 3.77

Gainesville, FL

May 2028

## Technical Skills

**Languages:** Python, C++, Go, HTML, CSS, JavaScript, TypeScript

**Developer Tools:** Git, VS Code, Visual Studio, PyCharm, Jupyter, Docker, Vite, Claude Code

**Frameworks/Libraries:** React, Node.js, Flask, Gorilla Mux, TanStack Router, Tailwind CSS, shadcn/ui, BAML, TensorFlow, NumPy, Pandas

**Cloud & Services:** Azure (App Services, Blob Storage, PostgreSQL, OpenAI, Entra ID/B2C, Storage Accounts), PostgreSQL

**Hardware/Embedded:** ESP32, ESP32-CAM, Raspberry Pi 5, computer vision pipelines

**AI/ML:** Agentic AI Development, Azure OpenAI (GPT-4), TensorFlow, BAML

**Coursework:** Data Structures & Algorithms, Computer Organization, Discrete Structures, Engineering Statistics, Computational Linear Algebra

## Experience

### Tampa Bay Innovation

Tampa, FL (Hybrid)

Head of Engineering

Oct 2025 – Present

- Lead all technical strategy and product development as sole engineer; architect full-stack applications with Node.js, React, TypeScript, and Azure services.
- Built automated startup identification system with Python-based web scraping; developed investor tools and AI-powered dashboards for client engagement.
- Direct technology roadmap and executive responsibilities including stakeholder communication, budget planning, and CEO advising.

### Chosen One Athletes

Remote

Director of Software Engineering

Dec 2025 – Jan 2026

- Architected full-stack sports-tech platform for athletes across all sports nationwide (30+ NFL, college, professional athletes) as sole engineer and de facto CTO.
- Built scalable Go backend (Gorilla Mux, Azure PostgreSQL, Azure AD B2C) with Azure OpenAI (GPT-4) integration, real-time SSE updates, and Blob Storage.
- Developed React 18 + TypeScript frontend (Vite, TanStack Router, Tailwind, shadcn/ui); deployed via Docker on Azure.

## Leadership & Programs

### The Foundry — UF Department of Computer & Information Science & Engineering (CISE)

Gainesville, FL

Technical Infrastructure Coordinator

May 2026 – Present

- Coordinating technical infrastructure decisions for a 3-semester apprenticeship program supporting 49 students across a wide range of project domains.
- Authoring program-wide decision memos on developer tooling, AI model access, and technology-stack guardrails for review by faculty and CISE department leadership.
- Researching and evaluating developer tools, AI coding agents, and cloud services against pedagogical fit, cost, and scalability across all three program phases.

### University of Florida AI Club (in partnership with AI<sup>2</sup> Center)

Gainesville, FL

Director of Technological Advancements

May 2025 – Present

- Lead technical projects and workshops on ML, data science, and LLMs; spearhead semester project integrating hardware, software, and computer vision.

## Projects

### Glass Tint — Facial Recognition Assistive Glasses | ESP32, ESP32-CAM, Python, OpenCV, ArcFace

Mar – Apr 2026

- Designed assistive wearable for visually impaired users; ESP32-CAM streams to ESP32 hub running Meta's ArcFace model to verify faces against an enrolled database in real time, delivering audio feedback for known vs. unknown individuals.

### Physics Vis | React, TypeScript, BAML, Python

May – July 2025

- Developed dynamic physics problem visualizer powered by LLM prompting with interactive React/TypeScript frontend for real-time animated solutions.

### SolScope — 1<sup>st</sup> Place, Sustainability Track, Gator Hacks 2025 | React.js, Python, scikit-learn, SQLite

January 2025

APIs: OpenStreetMap, NSRDB, Open Meteo, US EIA

- Built AI-driven platform evaluating land parcels for solar energy potential using ML models (Random Forest, k-NN) and interactive heat maps.

## Certifications

- Building Transformer-Based Natural Language Processing Applications

NVIDIA, July 2025
