Education

University of Florida

Bachelor of Science in Computer Science, GPA: 3.78

Gainesville, FL

May 2028

Technical Skills

Languages: Python, TypeScript, JavaScript, Go, C++, HTML/CSS

Frameworks/Libraries: React, Node.js, Bun, Flask, Tailwind CSS, Docker, Git, TensorFlow, scikit-learn, OpenCV

Cloud & AI: Azure (App Services, Blob Storage, PostgreSQL, Entra ID), LLM integration, agentic AI development

Hardware: ESP32, ESP32-CAM, Raspberry Pi 5

Certifications: Building Transformer-Based Natural Language Processing Applications (NVIDIA, July 2025)

Experience

Tampa Bay Innovation

Tampa, FL (Hybrid)

Head of Engineering

Oct 2025 – Present

- Own the architecture and engineering deliverables of a venture-intelligence platform, from data ingestion and LLM enrichment through scoring to the investor-facing app and set the technical roadmap with the CEO.
- Built the sourcing pipeline behind **16,701** startups, investors, accelerators, and incubators, pulling from Hacker News, Product Hunt, Lobsters, SEC EDGAR, and Y Combinator through scrapers, APIs, and LLM enrichment.
- Designed the evaluation model, built for investors to triage startups: a composite score (team, market, product, traction, timing) and a unicorn-potential score (TAM, network, founder-market fit), with competitive-landscape views.

Chosen One Athletes

Remote

Director of Software Engineering

Dec 2025 – Jan 2026

- Built a full-stack sports-tech platform from the ground up as sole engineer on a **2-week** contract; in continuous production use since **Dec 2025**, supporting **30+** NFL, college, and pro athletes.
- Built the Go backend (Gorilla Mux, Azure PostgreSQL, AD B2C, Azure OpenAI GPT-4, SSE) and React 18 + TypeScript frontend, deployed with Docker on Azure.

Leadership & Programs

The Foundry — UF Department of Computer & Information Science & Engineering (CISE)

Gainesville, FL

Technical Infrastructure Coordinator

May 2026 – Present

- Coordinating technical infrastructure decisions for a 3-semester apprenticeship program supporting **49** students.
- Authoring program-wide decision memos on developer tooling, AI model access, and technology-stack guardrails for review by faculty and CISE department leadership.

Bay Hacks 2026 — Tampa Bay Innovation

Tampa, FL

Lead Organizer

Jun 2026 – Sep 2026

- Spearheaded Tampa Bay Innovation's first hackathon, a **24-hour** event at USF: **194** registrants, **105** participants, **23** submissions.
- Secured **5** corporate sponsors (incl. Render, ElevenLabs) and **3** university chapters, funding **\$1,500+** in prizes across **5** tracks.
- Recruited a **9-person** judging panel, mentors, and volunteers; built the Devpost site with tracks, rules, and per-track judging rubrics.

University of Florida AI Club (*in partnership with AI² Center*)

Gainesville, FL

Director of Technological Advancements

May 2025 – Present

- Lead technical projects and workshops on ML, data science, and LLMs; spearhead semester project integrating hardware, software, and computer vision.

Projects

NevDraw — ShellHacks 2026 | *TypeScript, React, Bun, Effect, WebSockets*

Sep 2026

- Built a multiplayer whiteboard that turns plain-language typing into live wireframes and architecture diagrams; shipped **50** PRs (~15K lines of TypeScript) in one weekend.
- Classified text on every keystroke with the **JEV** model, drafting wireframes in as little as **4ms**; synced boards over a schema-typed WebSocket server (Effect on Bun) with a non-blocking LLM refinement pass.

roblox-ugc-pipeline | *Python, Blender, 3D foundation models*

May – Jul 2026

- Built an end-to-end pipeline that turns a text prompt or image into a marketplace-ready Roblox UGC asset, using Roblox's cube3d and TripoSG for mesh generation and validating output against Roblox's spec.
- Automated headless Blender stages that auto-rig meshes to the R15 skeleton, bake textures, and decimate to Roblox triangle budgets, with optional upload via Open Cloud.

SolScope — 1st Place, Sustainability Track, Gator Hacks 2025 | *React.js, Python, scikit-learn, SQLite*

January 2025

- Built AI-driven platform evaluating land parcels for solar energy potential using ML models (Random Forest, k-NN) on OpenStreetMap, NSRDB, Open-Meteo, and US EIA data.

Glass Tint — Facial Recognition Assistive Glasses | *ESP32, ESP32-CAM, Python, OpenCV, ArcFace*

Mar – Apr 2026

- Designed assistive wearable for visually impaired users; ESP32-CAM streams to ESP32 hub running Meta's ArcFace model to verify faces against an enrolled database in real time, delivering audio feedback for known vs. unknown individuals.
